Welcome to the Mistplay Android Challenge!
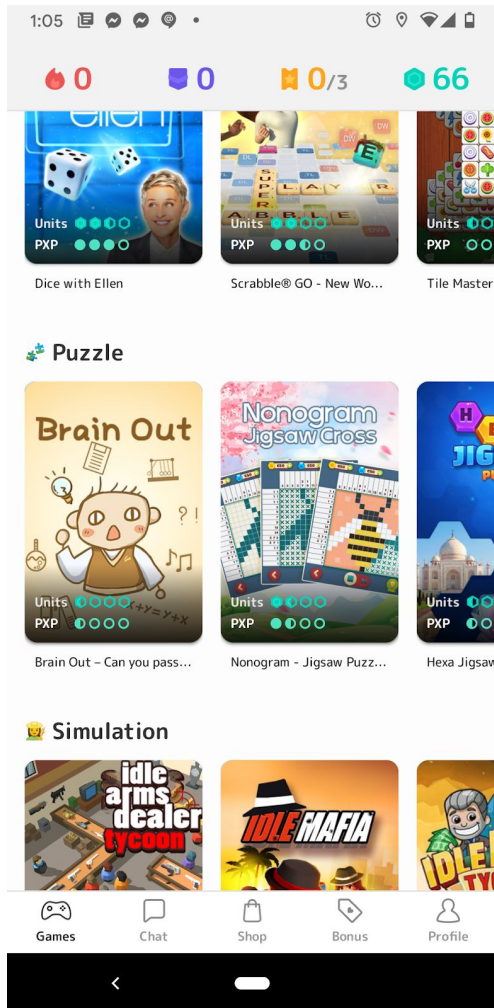

The Challenge: Create a vertical scrolling list of horizontally scrolling lists.

Mistplay supports this UI for displaying the games in separate categories. A screenshot of this is shown on the left.

The requirements for this mini project are to:

1) Build the functionality for the list of lists. Make sure to do this using Object-Oriented programming principles as well as design patterns.

2) Use the Kotlin programming language.

3) Incorporate the classes you build into a sample application. This sample application can use any design you choose.

4) Well commented and formatted code.

You can use the JSON list on the next page to populate the list in the sample application.

Please submit the code on Github once completed. Share the link to that Github repository as well as a short GIF/video of your implementation to the Talent team. The app should be simple to build and run through Android studio.

And that is the challenge. With this we wish you the best of luck, and hope to see you soon once you have finished it.

- Team Mistplay
